

Plan

The University of Sydney engaged Sturt Noble Associates to design and document a \$250,000 upgrade to the existing Manning Road frontage to the historic Main Building.

Existing sandstone flagging and retaining walls had deteriorated and required replacement in addition to the planting areas requiring a strong planting scheme to better present this important vista.

Existing sandstone flagging was retained and relaid where possible and likewise existing stone blocks redressed and reused in new walls.

The historic avenue plantings of Jacarandas were strengthened with advanced specimens. Plantings in context with historic university species were selected including Camellias, philodendrons, cycads, calatheas, gingers and ivy.

Retaining wall and stairs
